PROFESSIONAL SUMMARY

Odoo Developer with 1+ year of hands-on production experience in Odoo 17 Community Edition — specialising in custom module development, ERP customisation, and third-party API integration. Proven track record architecting and deploying 10+ custom Odoo modules across HR, Accounting, CRM, Sales, Inventory, and Helpdesk domains. Deep expertise in Python ORM, QWeb reporting, XML views, PostgreSQL schema design, and Odoo workflow automation. Experienced in full Odoo implementation lifecycle — from requirements gathering and module development through deployment, upgrades, user support, and production troubleshooting. Available for immediate joining. Open to remote work for UAE-based organisations.

ODOO TECHNICAL EXPERTISE

Odoo Versions: Odoo 17 Community Edition (primary), Odoo 18 (familiar)

Core Modules: Sales, Inventory, HR & Payroll, Accounting, CRM, Project Management, Helpdesk, Discuss, Purchase, Point of Sale

Custom Development: Custom Module Development, Model Extension, Wizard Models, Computed Fields, Constraints, Onchange Methods

Views & UI: XML View Design (Form, List, Kanban, Pivot, Graph, Calendar), QWeb Templates, PDF Reporting, Client Actions

Backend & ORM: Python ORM (search, read, write, create, unlink), Domain Filters, Inheritance (`_inherit`, `_inherits`), `AbstractModel`, `TransientModel`

Workflow & Automation: Multi-Stage Approval Workflows, Scheduled Actions, Automated Actions, Email Notifications, Mail Templates

Security & Access: Record Rules, Access Control Lists (ACLs), Field-Level Security, User Roles & Groups, `ir.rule`

Integration: RESTful API endpoints within Odoo, JSON-RPC, XML-RPC, OAuth2, JWT, Third-Party CRM & Payment Gateway Integration

Infrastructure: Multi-Instance Odoo Server Management, Nginx Reverse Proxy, SSL/TLS, Systemd Services, PostgreSQL Administration, Git-based Deployment

GENERAL TECHNICAL SKILLS

Languages: Python (Advanced), JavaScript, XML, HTML5, CSS3, Java

Databases: PostgreSQL (Query Optimisation, Indexing, Schema Design), MySQL, Redis

Frameworks: FastAPI, SQLAlchemy, React.js, Tailwind CSS

DevOps & Tools: Git/GitHub, Docker, AWS (EC2, S3, RDS), CI/CD (GitHub Actions), Postman, Linux (Ubuntu), VS Code Remote SSH

WORK EXPERIENCE

Odoo Developer

Kapil Technologies

Apr 2025 – Present

Hyderabad, Telangana

- Architected, customised, and maintained 15+ core Odoo modules (Sales, Inventory, HR, Accounting, CRM, Helpdesk, Discuss) for a production ERP environment serving 500+ daily users — handling the full development lifecycle from requirement analysis to deployment and user support.
- Built 10+ production-ready custom Odoo modules from scratch including advanced inventory management, custom invoicing workflows, employee attendance systems, helpdesk analytics, weekly team planning with multi-stage approval workflows, and client portals.
- Developed and maintained Odoo module for helpdesk analytics with SLA performance tracking, ticket resolution metrics, team statistics, and priority distribution — including a QWeb PDF report with a wizard-based filter interface.
- Implemented field-level security using Odoo record rules and ACLs to restrict sensitive data (Turn Around Time metrics) from client-facing user groups while maintaining visibility for internal roles.
- Designed and deployed 20+ secure RESTful API endpoints within the Odoo framework, integrating 8+ third-party services including payment gateways (Razorpay, PayU), shipping providers (FedEx, DHL), and CRM platforms using OAuth2 and JWT authentication.

- Optimised PostgreSQL queries reducing average API response time from 2.3s to 0.4s through strategic indexing, query restructuring, and ORM-level tuning; managed database schema design for custom modules with complex relational structures.
- Configured and maintained multi-instance Odoo production server on Ubuntu (Dell OptiPlex 7050), managing two separate Odoo instances, Nginx reverse proxy with WebSocket/longpolling support, SSL/TLS via Let's Encrypt, and systemd service dependency ordering.
- Troubleshoot and resolved critical production issues including gevent port conflicts between Odoo instances, XML view parse failures caused by unescaped characters, mail template rendering failures, and view type conflicts (list vs tree) specific to Odoo 17.
- Configured Odoo Discuss module with real-time WebSocket notifications by adding `workers`, `gevent_port`, and `proxy_mode` to server config and updating Nginx with WebSocket upgrade headers.
- Configured 50+ automated workflows and scheduled jobs processing background tasks (email notifications, report generation, data synchronisation), reducing manual processing time by 70%.
- Successfully migrated 100K+ records from legacy systems to Odoo with 99.9% data accuracy; built ETL pipelines for ongoing data synchronisation across integrated services.
- Managed Git-based deployment pipeline via GitHub for version-controlled Odoo custom addon releases across development and production environments.

NOTABLE ODOO MODULE IMPLEMENTATIONS

Team Weekly Plan Module | *Odoo 17, Python ORM, XML Views, QWeb, Mail Templates*

- Built a custom `team_weekly_plan` module from scratch providing weekly task planning and management with a multi-stage approval workflow (Draft → Submitted → Approved/Rejected).
- Implemented team manager supervision, automated email notifications via Python-rendered `mail.mail` records, task status tracking, and role-based access — resolving Odoo 17-specific mail template rendering issues during development.

Helpdesk Analytics & PDF Reporting Module | *Odoo 17, Python, QWeb, PostgreSQL, Wizard Models*

- Developed a comprehensive helpdesk analytics module on top of Odoo's helpdesk with SLA compliance tracking, pivot/graph views, and a professional QWeb PDF report rendered via wkhtmltopdf.
- Resolved SQL errors with computed fields in pivot/graph views; implemented wizard model for report filtering by date range, team, and ticket priority; enforced field-level security restricting TAT data from client roles.

Production Multi-Instance Odoo Server | *Ubuntu, Nginx, PostgreSQL, Systemd, Let's Encrypt*

- Configured and manage two production Odoo 17 instances on a single physical server with independent PostgreSQL databases, Nginx virtual hosts, HTTPS on custom ports, and systemd service dependency ordering to prevent startup conflicts.
- Set up Tailscale VPN with VS Code Remote SSH for secure remote development and administration of the production environment from a Windows home setup.

OTHER PROJECTS

POS Application | *FastAPI, React.js, PostgreSQL, Redis, Celery, Stripe, Docker, AWS*

In Development

- Building a cloud-based Point-of-Sale system with FastAPI async backend and React.js frontend, incorporating Stripe payment integration, Celery background tasks, and AWS deployment — expanding expertise beyond the Odoo ecosystem into modern Python microservices.

EDUCATION

B.Tech – Computer Science & Engineering

2019 – 2023

Dhanekula Institute of Engineering and Technology

Java Full Stack Development Bootcamp

2023

Tap Academy

CERTIFICATIONS

AWS Academy Cloud Foundations – Amazon Web Services

AWS Academy Machine Learning Foundations – Amazon Web Services

Azure Data Engineer Associate – Microsoft

PCAP: Programming Essentials in Python – Cisco Networking Academy / Open EDG Python Institute

DevOps Foundation – Infosys Springboard

Design Thinking for Innovation – Coursera
